Preface

This e-book contains abstracts of papers accepted for presentation at the 41st Solid Mechanics Conference (SOLMECH 2018). The conference was held in Warsaw, Poland, on August 27-31, 2018. More details can be found on the conference website: <http://www.solmech2018.ippt.pan.pl>

The Solid Mechanics Conferences are a series of biennial international conferences, which have been organized by the Institute of Fundamental Technological Research of the Polish Academy of Sciences (IPPT PAN) since 1953. This conference series aims at maintaining high scientific standards, while providing a friendly atmosphere that facilitates discussion of theoretical and applied research topics on solid mechanics. A set of plenary and keynote lectures is delivered by invited speakers of international recognition in their field of research.

This, the 41st edition of the conference series, was held at the Conference Center of Warsaw University, a quiet and pleasant vicinity close to the old town of Warsaw. The conference hosted 7 general lectures and 16 thematic sessions. 273 abstracts from 28 European and non-European countries (43% of them from outside Poland) were presented.

The solid mechanics of materials and structures is in itself an area of active and dynamic research, that also provides the foundation of numerous industrial applications that necessitate sophisticated computational models and methods. Naturally, the SOLMECH conference series encompass these research directions as well and this trend is clearly growing; and we foresee that it will continue to grow in the future.

Prof. K. Wiśniewski
Chairman of SOLMECH 2018

Prof. T. Burczyński
Director of IPPT PAN

41st SOLID MECHANICS CONFERENCE
AUGUST 27-31, 2018, WARSAW, POLAND
<http://solmech2018.ippt.pan.pl>

Organizers

The 41st Solid Mechanics Conferences is organized by the Institute of Fundamental Technological Research under the auspices of the Committee on Mechanics, both of the Polish Academy of Sciences.

International Advisory Board

Z. Bažant (<i>USA</i>)	P. Ladeveze (<i>France</i>)	A. Rusinek (<i>France</i>)	P. Wriggers (<i>Germany</i>)
D. Bigoni (<i>Italy</i>)	W. K. Liu (<i>USA</i>)	H. Tobushi (<i>Japan</i>)	R. Zaera (<i>Spain</i>)
T. Inoue (<i>Japan</i>)	E. Oñate (<i>Spain</i>)	W. Wagner (<i>Germany</i>)	Z. Zhuang (<i>China</i>)
S. Kourkoulis (<i>Greece</i>)	I. Romero (<i>Spain</i>)		

Honorary Scientific Committee

R. Będziński	J. Holnicki-Szulc	Z. Mróz	M. Pietrzyk
A. Borkowski	J. Kubik	A. Nowicki	G. Szefer
W. Gutkowski	M. Kleiber	W. Pietraszkiewicz	A. Tylikowski

Scientific Committee

J. Awrejcewicz (<i>PŁ</i>)	T. Kapitaniak (<i>PŁ</i>)	J. Pamin (<i>PK</i>)	B. Skoczeń (<i>PK</i>)
J. Badur (<i>IMP</i>)	Z. Kotulski (<i>PW</i>)	H. Petryk (<i>IPPT</i>)	S. Stupkiewicz (<i>IPPT</i>)
Cz. Bajer (<i>IPPT</i>)	P. Kowalczyk (<i>IPPT</i>)	R. Pęcherski (<i>IPPT</i>)	R. Śliwa (<i>PRz</i>)
M. Basista (<i>IPPT</i>)	Z. Kowalewski (<i>IPPT</i>)	E. Pieczyńska (<i>IPPT</i>)	J. Tejchman (<i>PG</i>)
T. Burczyński (<i>IPPT</i>)	M. Kuczma (<i>PP</i>)	P. Pyrzanowski (<i>PW</i>)	J. Warmiński (<i>PL</i>)
J. Chrościelewski (<i>PG</i>)	T. Lewiński (<i>PW</i>)	J. Rojek (<i>IPPT</i>)	K. Wilde (<i>PG</i>)
P. Dłużewski (<i>IPPT</i>)	T. Łodygowski (<i>PP</i>)	T. Sadowski (<i>PL</i>)	K. Wiśniewski (<i>IPPT</i>)
D. Gawin (<i>PŁ</i>)	E. Majchrzak (<i>PŚ</i>)	A. Seweryn (<i>PB</i>)	

Organizing Committee

K. Wiśniewski - *Chairman of the Conference*
B. Błachowski - *Scientific Secretary*
M. Nowak - *Coordinator*
P. Tazowski - *Webmaster, Email Coordinator*

Thematic Sessions and Their Organizers

S01: Elasticity, plasticity and phase transition

S. Forest (*MINES Paristech, CNRS, Paris*), H. Petryk (*IPPT PAN, Warsaw*)

S02: Micromechanics, interfaces and multiscale modelling

V. Kouznetsova (*Eindhoven UT*), A. Menzel (*TU Dortmund*), S. Stupkiewicz (*IPPT PAN, Warsaw*)

S03: Damage and fracture modelling of advanced materials

M. Basista (*IPPT PAN, Warsaw*), G. Bolzon (*Polit. di Milano*), Ch. Sommitsch (*TU Graz*)

S04: Plasticity, damage and fracture: microstructural aspects

K. Kowalczyk-Gajewska (*IPPT PAN, Warsaw*), S. Mercier (*Univ. of Lorraine, LEM3, Metz*), J. Rodriguez-Martinez (*Univ. Carlos III, Madrid*), G. Vadillo (*Univ. Carlos III, Madrid*)

S05: Computational aspects of solid mechanics

O. Allix (*LMT, ENS Cachan, France*), T. Burczyński (*IPPT PAN, Warsaw*), P. Kowalczyk (*IPPT PAN, Warsaw*)

S06: Discrete and multiscale modelling in solid mechanics

J. Rojek (*IPPT PAN, Warsaw*), M. Pietrzyk (*AGH Univ. of Science and Technology, Cracow*), R. Kačianauskas (*Vilnius Gediminas TU, Lithuania*), B. Peters (*Université du Luxembourg*)

S07: Coupled fields in nanostructures and continua

T. Łodygowski (*Poznan UT*), R. Pęcherski (*IPPT PAN, Warsaw*), H. M. Shodja (*Sharif UT, Iran*)

S09: Experimental mechanics

S. Kourkoulis (*National TU of Athens*), Z.L. Kowalewski (*IPPT PAN, Warsaw*)

S10: Geomechanics and multiscale modelling of materials

Z. Mróz (*IPPT PAN, Warsaw*), S. Pietruszczak (*McMaster University, Ontario*), R. Michalowski (*University of Michigan*), J. Tejchman (*Gdansk UT*)

S12: Biomechanics

R. Będziński (*TU Wroclaw*), J-F. Ganghoffer (*Univ. of Lorraine, Nancy*), E. Majchrzak (*Silesian UT*), M. Nowak (*TU Poznan*)

S13: Smart materials and structures

E. A. Pieczyńska (*IPPT PAN, Warsaw*), H. Tobushi (*Aichi IT, Toyota-city*), Q. P. Sun (*HKUST, Hong Kong*)

S14: Structural mechanics and optimization

M. Gilbert (*U Sheffield*), T. Lewiński (*Warsaw UT*), A. V. Pichugin (*Brunel U., London*)

S15: Nonlinear and adaptive dynamical systems

P. Perlikowski (*Łódź UT*), S. Evangelou (*Imperial College, London*), Ł. Jankowski (*IPPT PAN, Warsaw*)

S16: Shells and plates

Dedicated to the anniversary of Prof. W. Pietraszkiewicz with the tribute speech by Prof. J. Badur (*IMP PAN, Gdansk*)

J. Chróścielewski (*Gdansk UT*), F. Gruttmann (*TU Darmstadt*), V. Eremeyev (*Rostov on Don, Gdansk UT*), K. Wiśniewski (*IPPT PAN, Warsaw*)

S17: Stochastic mechanics

Dedicated to the memory of the late Professor Kazimierz Sobczyk (1939-2017)

R. Iwankiewicz (*TU Hamburg*), Z. Kotulski (*Warsaw UT*)

S18: Composite Materials and Structures

B. Brank (*U Ljubljana*), J. Hohe (*IWM Freiburg*), I. Kreja (*Gdansk UT*)

STRESS RELAXATION EFFECTS IN TiNi SMA

E.A. Pieczyska¹, V. Dunić², R. Slavkovic² and Z. Kowalewski¹

¹ *Institute of Fundamental Technological Research, Polish Academy of Sciences, Warsaw, Poland*

² *University of Kragujevac, Faculty of Engineering, Kragujevac, Serbia*

e-mail: epiecz@ippt.pan.pl

1. Introduction

Experimental and numerical results of thermomechanical effects related to phenomena of stress relaxation investigated in TiNi SMA subjected to modified program of strain-controlled tensile loading at room temperature are analyzed. More details related to thermo-mechanical coupling approach can be find in [1, 2].

2. Experimental procedure

The experiments were carried out on belt type specimens cut off from TiNi SMA strip. The specimens were subjected to displacement-controlled tension with strain rate $5 \times 10^{-2} s^{-1}$. The loading and unloading processes were executed in two following way: loading up to strain equal to 4%; maintaining the strain value during 3 minutes; reloading up to the strain of 7% and unloading to zero stress. In the experiment, a monotonic stress drop of 170 MPa and specimen temperature increase of cca. 15 K were observed.

3. Thermo-mechanically coupled SMA constitutive model and numerical modeling

Details of the SMA phenomenological model [3], implemented into the software for structural analysis PAK based on Finite Element Method (FEM) were given in the previous paper of the authors [1, 2]. To realize the thermo-mechanical coupling [2] in the partitioned approach [4], the FEM programs for structural (PAKS) and heat transfer analysis (PAKT) were connected using the Component Template Library (CTL), developed by Niekamp [5]. The heat transfer program PAKT enabled computation of a temperature change in solids. The elementary dissipative energy q_{dis} of the martensitic phase transformation can be expressed as [2, 3]:

$$q_{dis} = \eta (\Pi - \rho \Delta s_0 T) \dot{\xi},$$

where η denotes the dissipative factor, Π is the thermodynamic force, $\rho \Delta s_0$ describes the stress sensitivity coefficient, $\dot{\xi}$ is the rate of martensitic volume fraction and T is the SMA temperature [3]. The TiNi belt type specimen has been modeled by the FEM 3D elements [1, 6]. It was assumed that the specimen ends have the same and constant temperature, because the grips of the testing machine are very large in comparison to the specimen thickness. The rest of the specimen model enabled free convection.

4. Results and conclusions

Comparison of the experimental and numerical results in the form of the stress and average temperature variations vs. strain is shown in Fig 1 for the TiNi SMA subjected to the loading program described above.

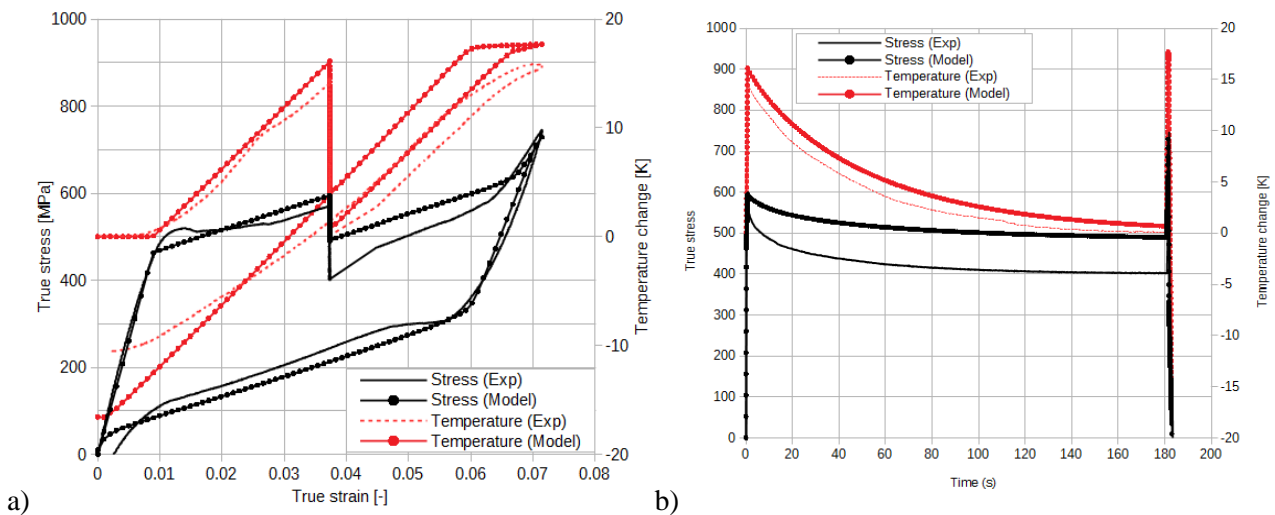

Figure 1. TiNi tension at strain rate of $5 \times 10^{-2} \text{ s}^{-1}$ with 3 min loading break induced at advanced stage of martensite transformation - experiment and model. Stress and temperature variations vs.: strain (a); time (b).

The numerical approach proposed confirmed decrease of the stress when the strain was kept constant during the SMA loading (Fig. 1). A monotonic stress and the temperature drops were observed. Large stress relaxation reduction was observed for the strain rate applied. After the relaxation stage was completed, the transformation processes develop in typical manner. The exothermic character of the martensitic forward transformation was demonstrated, as well as decrease of the specimens temperature during the reverse transformation. Even a temperature decline below the initial level was confirmed by the model.

Acknowledgements

The research was supported by the Polish National Centre of Science- 2014/13/B/ST8/04280 and 2014/15/B/ST8/04368 and the Ministry of Education, Science and Technological Development, Serbia - TR32036 and III41007.
